Message from the Guest Editor

The 2021 8th International Conference on Manufacturing and Industrial Technologies (ICMIT 2021) aims to provide a platform for academics, researchers and scientists to share ideas and discuss research findings and proposals related to Manufacturing and Industrial Technologies.

We are delighted to announce that papers presented at this conference that report significant original research results on composite materials may be further considered for publication in Journal of Composite Sciences under a special issue. Specifically, this special issue is intended to address the science, engineering and application of composite materials relevant to a wide range of areas of current and future interest, such as intelligent systems, robotics, 3D printing, factory communications and automation, flexible manufacturing, data acquisition and signal processing, vision systems, and power electronics, and other related areas.
