

Special Issue

The Mechanical Properties of Fiber Reinforced Composites

Message from the Guest Editors

The mechanical properties of fiber-reinforced composites significantly impact their performance and applications. These composites consist of a matrix and embedded fibers, such as glass, carbon, or aramid. The interaction between the matrix and fibers determines key mechanical properties like strength, stiffness, toughness, fatigue resistance, impact resistance, durability, and dimensional stability. Optimizing these properties is vital for designing and manufacturing fiber-reinforced composites for diverse applications, including automotive, aerospace, sporting goods, and industrial uses. With their high strength, stiffness, and tailored properties, fiber-reinforced composites offer versatility across engineering fields. This Special Issue focuses on recent advancements in mechanical properties for structural applications, welcoming papers covering advanced testing methods, analysis approaches (such as experimental measurement techniques, artificial intelligence, and physics-based modeling), and data-driven methodologies.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Dr. Francesco Tornabene
Department of Innovation Engineering, University of Salento, 73100
Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Materials Science, Composites) / CiteScore - Q1 (Engineering (miscellaneous))
