

## Special Issue

# Research on Recycling Methods or Reuse of Composite Materials

### Message from the Guest Editors

Composites are increasingly used in engineering due to their strength, corrosion resistance, light weight, and fatigue properties. However, their widespread use raises concerns about disposal and recycling at the end of life. Despite advancements, recycling remains challenging due to the heterogeneous nature of composites. Current methods, such as mechanical, thermal, and chemical recycling, are still in early stages and costly. Research in composite recycling, especially on sustainable and efficient methods, is limited. This Special Issue invites articles focused on composite recycling, including fibre-matrix separation, thermoset resin recovery, glass fibre recycling, thermoplastic composites, resin recovery, and large component recycling. We particularly welcome contributions addressing the environmental and economic challenges of current processes. We also seek submissions on recent advances in polymer composite recycling, emphasizing novel technologies, manufacturing, characterization, and practical applications. Full papers, reviews, and case studies on recycling innovations are encouraged.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Dr. Francesco Tornabene  
Department of Innovation Engineering, University of Salento, 73100  
Lecce, Italy

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

##### Journal Rank:

JCR - Q2 (Materials Science, Composites) / CiteScore - Q1 (Engineering (miscellaneous))
