

## Special Issue

# Electromagnetic Interference (EMI) Shielding Composites

### Message from the Guest Editor

Electromagnetic pollution, known as electromagnetic interference (EMI), has increased and will continue to do so, reaching higher levels because of the wide proliferation of electrical/electronic products and battery-based electric vehicles. The most common use of EMI shielding is for the reflection of metal-based materials; however, it has inherent disadvantages such as its heavy weight, high corrosion, and high cost. The development of light-weight and cost-effective EMI shielding materials is a priority that must be solved for the development of electric vehicles and micro-electronic devices. The main aim of this Special Issue is to collect various studies about investigations into the development of EMI shielding composites. The submitted studies can deal with EMI shielding fillers, polymer matrix, structure and fabrication processes of the composites, etc. Research on radar absorbing structure (RAS) using destructive interference or multi-layer structures for multiple reflections is also welcome.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Dr. Francesco Tornabene

Department of Innovation Engineering, University of Salento, 73100  
Lecce, Italy

---

#### Author Benefits

##### Open Access:

free for readers, with article processing charges (APC) paid  
by authors or their institutions.

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec,  
CAPlus / SciFinder, and other databases.

##### Journal Rank:

JCR - Q2 (Materials Science, Composites) / CiteScore - Q1  
(Engineering (miscellaneous))
