

Special Issue

Vibration-based Energy Harvesting Techniques via Smart Materials and Structures

Message from the Guest Editors

Smart cities are entering a new era, in which information and communication technologies are used to enhance the quality and performance of urban services. The evolution of IoT technologies to increase human interaction will require a fundamental change that enables the vast deployment of sensors everywhere. One viable solution is to autonomously harness energy from the ambient environment. With the ongoing development of wireless sensor networks and portable electronic devices, energy harvesting from ambient sources using various smart materials and structures has received significant research attention. This Special Issue aims to bring together research efforts on this topic, and we encourage that all papers in this Special Issue consider various aspects of vibration-based energy harvesting techniques using smart materials and structures.

Guest Editors

Dr. S.K. Lai

Department of Civil and Environmental Engineering, The Hong Kong Polytechnic University, Hong Kong, China

Prof. Dr. Songye Zhu

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Dr. Francesco Tornabene
Department of Innovation Engineering, University of Salento, 73100
Lecce, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Materials Science, Composites) / CiteScore - Q1 (Engineering (miscellaneous))
