Advances in Oculoplastic Surgery: From Eyelid Reconstruction to Innovative Techniques

Message from the Guest Editor

Oculoplastic surgery has evolved significantly over recent decades, integrating advances in reconstructive techniques, biomaterials, and aesthetic principles to improve both functional outcomes and patient satisfaction. From complex eyelid reconstruction following trauma or tumor excision to the adoption of minimally invasive procedures and novel technologies, these contributions showcase the breadth of innovation in oculoplastics. This Special Issue brings together original research and clinical reviews that highlight the expanding frontiers of the field, from functional and aesthetic eyelid reconstruction to novel minimally invasive and image-guided approaches. Particular emphasis is placed on techniques that enhance patient outcomes, reduce recovery time, and address complex pathologies with precision. I strongly believe this collection will serve as a valuable resource for clinicians, researchers, and trainees seeking to stay at the forefront of oculoplastic surgery and that it will inspire further innovation and excellence in clinical practice.

About the Journal

Message from the Editor-in-Chief

The primary objective of the *Journal of Clinical & Translational Ophthalmology (JCTO)* (ISSN 2813-1053) is to establish a forum that allows the basic science researcher to gain insight into current clinically relevant questions, while simultaneously providing clinicians with a better understanding of the underlying pathophysiology of the clinical presentations that they experience on a first-hand basis.

We look forward to publishing highinterest, peer-reviewed manuscripts covering a wide range of ophthalmic conditions, including original research papers, review articles, short communications, case studies, and commentaries. It is the intention of the Journal to encourage a robust response from the readership as it relates to these contemporary topics in order to provide a more dynamic experience that will undoubtedly contribute to the translational mission of the Journal.

Editor-in-Chief

Prof. Dr. Jack V. Greiner

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 42.8 days after submission; acceptance to publication is undertaken in 3.7 days (median values for papers published in this journal in the second half of 2025).

Recognition of Reviewers:

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
