Retinal Diseases: Recent Advances in Diagnosis and Treatment

Message from the Guest Editors

In recent years, we have witnessed significant advances in the diagnosis and treatment of retinal diseases. These advances have been made possible by the development of novel imaging technologies, such as optical coherence tomography (OCT) and angiography, which enable the detailed visualization of the retina. In addition, there have been major advances in the development of novel drugs and gene therapies for retinal diseases. This Special Issue in the *Journal of Clinical & Translational Ophthalmology*, focusing on retinal diseases, will connect leading experts in the field to discuss the latest advances in this area. The articles in this Special Issue will provide valuable insights into the potential of these advances to improve the diagnosis and treatment of retinal diseases.

About the Journal

Message from the Editor-in-Chief

The primary objective of the *Journal of Clinical & Translational Ophthalmology (JCTO)* (ISSN 2813-1053) is to establish a forum that allows the basic science researcher to gain insight into current clinically relevant questions, while simultaneously providing clinicians with a better understanding of the underlying pathophysiology of the clinical presentations that they experience on a first-hand basis.

We look forward to publishing highinterest, peer-reviewed manuscripts covering a wide range of ophthalmic conditions, including original research papers, review articles, short communications, case studies, and commentaries. It is the intention of the Journal to encourage a robust response from the readership as it relates to these contemporary topics in order to provide a more dynamic experience that will undoubtedly contribute to the translational mission of the Journal.

Editor-in-Chief

Prof. Dr. Jack V. Greiner

1. Department of Ophthalmology, Harvard Medical School, Boston, MA, USA
2. Department of Ophthalmology, Tufts University School of Medicine, Boston, MA, USA
