Advances in Strabismus and Amblyopia

Message from the Guest Editor

Strabismus and amblyopia are common visual disorders affecting both paediatric and adult populations. These conditions can have profound effects on visual development, binocular vision, and quality of life. Significant advances in diagnosis and management have been made in the field; however, many questions remain regarding the underlying mechanisms, optimal clinical management, and long-term outcomes associated with these disorders. This Special Issue will provide a platform for original research and comprehensive reviews addressing contemporary issues related to strabismus and amblyopia. We welcome submissions covering both basic and clinical research that advance our understanding of these conditions and their management. We look forward to receiving your contributions and to advancing the understanding and clinical management of strabismus and amblyopia.

About the Journal

Message from the Editor-in-Chief

The primary objective of the *Journal of Clinical & Translational Ophthalmology (JCTO)* (ISSN 2813-1053) is to establish a forum that allows the basic science researcher to gain insight into current clinically relevant questions, while simultaneously providing clinicians with a better understanding of the underlying pathophysiology of the clinical presentations that they experience on a first-hand basis.

We look forward to publishing highinterest, peer-reviewed manuscripts covering a wide range of ophthalmic conditions, including original research papers, review articles, short communications, case studies, and commentaries. It is the intention of the Journal to encourage a robust response from the readership as it relates to these contemporary topics in order to provide a more dynamic experience that will undoubtedly contribute to the translational mission of the Journal.

Editor-in-Chief

Prof. Dr. Jack V. Greiner
