Deadline for manuscript
submissions:

closed (15 April 2018)

Message from the Guest Editor

Dear Colleagues,

Much work has been published over recent decades demonstrating important functions for each of the FGF, TGF- β , BMP, and Wnt signaling pathways in the development of virtually all tissues in animals. Given the maturity of our understanding of the molecular events in each of these pathways, the next steps are to further understand how these pathways interact at the signalling level. This Special Issue will focus on this question of crosstalk in any model organism and any tissue during development.

Message from the Editor-in-Chief

The *Journal of Developmental Biology* (JDB) publishes original research papers and timely reviews. Our primary aim is to provide a platform for the publication of studies on the development of multicellular organisms efficiently and professionally; papers undergo a fast, yet thorough, peer-review process. JDB is an open access journal and accepted contributions are published immediately online, providing unlimited access to the scientific community and general public. We look forward to receiving your contribution to our journal and to working with fellow researchers.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.1 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the second half of 2023).
