submissions:

closed (30 September 2020)

Message from the Guest Editor

Auguste Weismann postulated more than 120 years ago that germ cells are set apart from somatic cells very early during development. He was the first to propose a model for cell specification. His views implied that later in the development as well as during the lifetime of an organism, changes that occurred in the somatic cells would never be passed on to the germ cells. This gave rise to the theoretical concept of the “Weismann barrier”. A. Weismann rejected Jean-Baptiste Lamarck’s ideas on the transgenerational inheritance of acquired traits.

Today, a growing number of studies indicates that this barrier can be overcome and that certain aspects of our life history can be passed on to the next generation. It is also known that many organisms do not have this barrier— in other words, this strict distinction between somatic cells and germ cells.

The purpose of this Special Issue of the *Journal of Developmental Biology* is to bring together research highlights, reviews or comments on recent findings about germ cell specification, the distinction between somatic and germ lineages, and the “Weismann barrier”.

Message from the Editor-in-Chief

The *Journal of Developmental Biology (JDB)* publishes original research papers and timely reviews. Our primary aim is to provide a platform for the publication of studies on the development of multicellular organisms efficiently and professionally; papers undergo a fast, yet thorough, peer-review process. JDB is an open access journal and accepted contributions are published immediately online, providing unlimited access to the scientific community and general public. We look forward to receiving your contribution to our journal and to working with fellow researchers.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, ESCI (Web of Science), PubMed, PMC, PubAg, CAPlus / SciFinder, and other databases.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.1 days after submission; acceptance to publication is undertaken in 3.8 days (median values for papers published in this journal in the second half of 2023).
