

Special Issue

New Advances in Human Posture and Movement 2.0

Message from the Guest Editor

Dear Colleagues, Postural control requires a complex integration of sensory information (visual, vestibular and proprioceptive systems) regarding the positions of all body parts relative to the environment and the generation of appropriate motor responses to control body movement. For humans, standing is a fundamental part of daily living activities that is essentially controlled by the calf muscles which counteract the destabilizing effect of gravity. Passive stiffness and open loop mechanisms contribute to the regulation of the muscle activity required for stance control. This Special Issue, “New Advances in Human Posture and Movement”, aims to present the latest research on postural and movement control, and authors are invited to submit related case reports, original research papers, and review articles.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Giuseppe Musumeci
Department of Biomedical and Biotechnological Sciences, Anatomy,
Histology and Movement Sciences Section, School of Medicine,
University of Catania, 95123 Catania, Italy

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, PubMed,
PMC, FSTA, and other databases.

Journal Rank:

JCR - Q2 (Sport Sciences) / CiteScore - Q2 (Physical
Therapy, Sports Therapy and Rehabilitation)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 26.9 days after
submission; acceptance to publication is undertaken in 1.9
days (median values for papers published in this journal in
the first half of 2025).
