Deadline for manuscript  
submissions:

**closed (15 October 2022)**

### Message from the Guest Editor

This Special Issue related to Social Intelligence in a Digital World is therefore calling for submissions that:

- Investigate what social intelligence looks like in a digital context.
- Explore advances in the measurement of social intelligence that are facilitated by technology—particularly if those new measures are validated against traditional measures of cognitive ability, personality, and existing measures of social intelligence.
- Examine social intelligence across different modalities. For example, email, text messages, internet chats, virtual meetings, face-to-face individual meetings, and face-to-face group meetings all present different contexts that demand different sets of skills and abilities for reading the cultural cues associated with those contexts.
- Explore the relationship between social intelligence and social media use.
- Empirically probe the relationships between constructs such as social intelligence, cultural intelligence, emotional intelligence, personality, and general cognitive ability, and other related constructs.
