Message from the Guest Editors

The relationship between intelligence and creativity has been investigated for over half a century, however, researchers continue to debate the nature of the association between intelligence and creativity. Relevant research has become increasingly rich by considering specific facets of intelligence as well as specific conceptualizations of creativity. Moreover, recent advances in the measurement and modeling of these constructs have revealed new insights. These conceptual and methodological developments have paralleled new theories on the potential contribution of intelligence to creativity, such as the those emphasizing the role of cognitive control in creative thought.

With this Special Issue, we aim to highlight recent advances in the study of intelligence and creativity. Although the main focus of the special issue is intelligence, we also encourage submissions that explore other cognitive factors that may explain individual differences in creative thinking. The Special Issue will consider contributions that present empirical research and theoretical work that deepens our understanding of the relationship between intelligence and creativity.

Message from the Editor-in-Chief

The relatively new and ambitious *Journal of Intelligence* is devoted to the study of human intelligence. Intelligence is a fundamental core of being human, with far-ranging implications for all members of our society. Now more than ever, in a world in which most have access to the Internet, information, and misinformation, with reduced face-to-face interactions, understanding how to measure and develop human intelligence is a critical and vital mission. Human intelligence is studied from many different perspectives, for different purposes, and this journal has an open policy with respect to approaches and methodologies. We encourage submissions with the potential to innovate, show alternative perspectives, and highlight the importance of developing and measuring intelligence as well as studies on intelligence that have an impact on our lives.

Author Benefits

Open Access:— free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SSCI (Web of Science), PubMed, PMC, PsycInfo, PSYINDEX, and other databases.

Journal Rank: JCR - Q1 (Psychology, Multidisciplinary) / CiteScore - Q2 (*Education*)
