## How Culture Impacts the Process of Cognitive Assessment

### Message from the Guest Editors

Cognitive assessment is a major cornerstone of psychological practice. Attempts to adjust scoring on intelligence tests in light of cultural group membership and the selection of measures based upon cultural loading have yielded limited results and have not been adopted for mainstream use. Intelligence measures continue to be used to determine competence in neuropsychological functioning, the educational classification of disabilities, identification of diftedness. and diagnosis of cognitive decline among older persons. The impact of artificial intelligence on the administration, scoring, and interpretation of cognitive measures will also be addressed. This Special Issue will bring together cutting-edge research and theoretical understanding addressing the impact of culture on cognitive assessment as it pertains to the application of the most popular measures of intelligence.

### **About the Journal**

### Message from the Editor-in-Chief

The relatively new and ambitious Journal of Intelligence is devoted to the study of human intelligence. Intelligence is a fundamental core of being human, with far-ranging implications for all members of our society. Now more than ever, in a world in which most have access to the Internet, information, and misinformation, with reduced face-to-face interactions, understanding how to measure and develop human intelligence is a critical and vital mission. Human intelligence is studied from many different perspectives, for different purposes, and this journal has an open policy with respect to approaches and methodologies. We encourage submissions with the potential to innovate, show alternative perspectives, and highlight the importance of developing and measuring intelligence as well as studies on intelligence that have an impact on our lives.
