Special Issue

Design Space Exploration and Resource Management of Multi/Many-Core Systems

Message from the Guest Editors

Depending upon the application domain, multi/many-core systems demand energy efficiency, reliabilty and/or security. These demands can be fulfilled by exploring the design space by considering the software applications and the multi/many-core chips to find the design points leading to efficiency in all the required metrics. Considering varying workloads in the systems over time, efficient resource management methodologies need to be developed to meet the requirements that can perform resource management decisions online without any prior analysis or can exploit offline explore design space to take efficient run-time decisions. Topics include but are not limited to:

- Design space exploration (DSE) techniques for multi/many-core systems;
- DSE considering optimisation for one or more metrics, such as accuracy, performance, energy consumption, reliability and security;
- Resource management considering various principles, e.g., machine learning and heuristics;
- Adaptive and hieracrchical resource management;
- Approximate computing to achieve trade-offs for various metrics.

About the Journal

Message from the Editor-in-Chief

Journal of Low Power Electronics and Applications is an open access journal which provides an advanced forum for rapid dissemination of innovative research and important results in all aspects of low power electronics and design.

It publishes reviews, regular research papers and short communications. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. The full experimental details must be provided so that the results can be reproduced.

Editor-in-Chief

Dr. Davide Bertozzi

Reader in Advanced Processing Technologies, Department of Computer Science, University of Manchester, Manchester M13 9PL, UK

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.4 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).

Journal Rank:

CiteScore - Q2 (Electrical and Electronic Engineering)
