Powder Metallurgy and Additive Manufacturing/3D Printing of Materials

Message from the Guest Editor

Powder metallurgy (PM) and related processes, including additive manufacturing (AM)/3D printing, are revolutionizing the manufacturing sector, especially for the production of the metallic components with added functionalities. Not only can they fabricate near-net-shaped components, but they can also help in the materials saving and weight reduction of components in the automobile and aerospace sectors, and help in reducing fuel consumption and promoting a greener environment. Both PM and AM are undergoing rapid development, with new improvements and innovations taking place rapidly. However, they still face several industrial challenges, like process capabilities, and material aspects including microstructure formation and properties and the process cycle. It is, therefore, necessary to devote attention to focus research and development activities in these fields, including PM and AM, to promote the industrialization of these processes and new technologies. This includes the production of powder, the properties of powder, AM process developments, the design of alloys for the AM process, and the post-processing of the components.

Guest Editor

Prof. Dr. Konda Gokuldoss Prashanth

Head of the Additive Manufacturing Laboratory, Professor at the Department of Mechanical and Industrial Engineering, Tallinn University of Technology, Ehitajate Tee 5, 19086 Tallinn, Estonia

About the Journal

Message from the Editor-in-Chief

Journal of Manufacturing and Materials Processing (JMMP) (ISSN 2504-4494) is a new MDPI peer-reviewed, open access venue with a focus on the scientific fundamentals and engineering methodologies of manufacturing and materials processing. We offer an online platform facilitating effective exchange of innovative scientific and engineering ideas and the dissemination of recent, original, and significant research and developmental findings. On behalf of the Editorial Board, I extend an invitation to our scientific and engineering colleagues to contribute high-quality, innovative, and ground-breaking research articles to *JMMP*.

Editor-in-Chief

Prof. Dr. Steven Y. Liang
George W. Woodruff School of Mechanical Engineering, Georgia
Institute of Technology, Atlanta, GA 30332-0405, USA

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPIus / SciFinder, Ei Compendex and other databases.

Journal Rank:

JCR - Q2 (Engineering, Mechanical) / CiteScore - Q2
(Mechanical Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2025).
