

## Special Issue

# Impulse-Based Manufacturing Technologies

### Message from the Guest Editor

In impulse-based manufacturing technologies, the energy required for forming, joining, or cutting components acts on the workpiece in a very short time and suddenly accelerates workpiece areas to very high velocities. The correspondingly high strain rates and inertia effects affect the behavior of many materials, resulting in technological benefits such as improved formability, reduced localizing and springback, extended possibilities to produce high-quality multi-material joints, and burr-free cutting. This Special Issue of *JMMP* will present current research findings which focus on exploiting the full potential of these processes by providing deep understanding of the technology and the material behavior and detailed knowledge about sophisticated process and equipment design. The range of considered processes covers electromagnetic forming, electrohydraulic forming, explosive forming, adiabatic cutting, forming by vaporizing foil actuators, and other impulse-based manufacturing technologies. For further information about the special issue, please visit [mdpi.com/si/50604](https://mdpi.com/si/50604).

## About the Journal

### Message from the Editor-in-Chief

*Journal of Manufacturing and Materials Processing (JMMP)* (ISSN 2504-4494) is a new MDPI peer-reviewed, open access venue with a focus on the scientific fundamentals and engineering methodologies of manufacturing and materials processing. We offer an online platform facilitating effective exchange of innovative scientific and engineering ideas and the dissemination of recent, original, and significant research and developmental findings. On behalf of the Editorial Board, I extend an invitation to our scientific and engineering colleagues to contribute high-quality, innovative, and ground-breaking research articles to *JMMP*.

### Author Benefits

#### High Visibility:

indexed within Scopus, ESCI (Web of Science), Inspec, CAPIus / SciFinder, Ei Compendex and other databases.

#### Journal Rank:

JCR - Q2 (Engineering, Mechanical) / CiteScore - Q2  
(Mechanical Engineering)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.2 days after submission; acceptance to publication is undertaken in 3.6 days (median values for papers published in this journal in the first half of 2025).
