### Message from the Guest Editors

Dear Colleagues,

Coastal wetlands are valuable and sensitive environments that are among the most productive yet highly threatened systems in the world. The complexity of coastal wetland systems can be better understood within the context of the biogeomorphology that includes the coastal landscapes of which they are a part. One of the most important roles of wetlands is the regulation of global climate change through sequestering and releasing a major proportion of fixed carbon in the biosphere. Global climate change is expected to exacerbate the loss and degradation of many coastal wetlands and the loss or decline of their species and to harm the human populations dependent on their services; however, projections about the extent of such loss and degradation or decline are not yet well-established.

We invite submissions on coastal wetlands from a range of disciplines (e.g., biogeomorphology, biology, ecology, geomorphology, oceanography, hydrology, and coastal zone management). They can be based on field observations, modeling, and/or geospatial techniques.

## Message from the Editor-in-Chief

The *Journal of Marine Science and Engineering* (JMSE; ISSN 2077-1312) is an international peer-reviewed open access journal which provides an advanced forum for studies related to marine science and engineering. The journal aims to provide scholarly research on a range of topics, including ocean engineering, chemical oceanography, physical oceanography, marine biology and marine geosciences. We invite you to publish in our journal sharing your important research findings with the global ocean community.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed with Scopus, SCIE (Web of Science), GeoRef, Inspec, AGRIS, and other databases.

**Journal Rank:** JCR - Q1 (*Engineering, Marine*) / CiteScore - Q2 (*Ocean Engineering*)
