Message from the Guest Editors

Projections of climate change and associated hazards point towards very serious socioeconomic and environmental impacts around the world. The coastal zone is home to over 10% of the global population and is one of the land zones that is highly vulnerable to climate change impacts. Therefore, the future of coasts and estuaries need to be managed not only for disaster reduction but also environmental conservation. Increased hazard levels will mean that coastal and estuary management will become more costly, and hence, risk-informed and effective adaptation measures that balance risk and reward will need to be developed and implemented. With a view to inspiring such innovative solutions, this Special Issue focuses on:

- Projections of climate change related coastal hazards (e.g., sea level rise, storm surge, waves);
- Projections of environmental changes due to climate change hazards (e.g., inundation, erosion, environmental damage);
- Coastal vulnerability assessment;
- Coastal disaster risk assessment;
- Human vs. natural impacts on extreme and long term coastal/estuary change;
- Adaptation measures to compact climate change impacts on coasts/estuaries.

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Journal of Marine Science and Engineering (JMSE, ISSN: 2077-1312) focuses on research in the fields of Ocean Engineering, Coastal Engineering, Physical Oceanography, Geological Oceanography, Marine Biology, and Marine Environmental Science. It publishes reviews, regular research papers, and short communications, as well as Special Issues on particular subjects. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed with Scopus, SCIE (Web of Science), Ei Compendex, GeoRef, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Engineering, Marine) / CiteScore - Q2 (Ocean Engineering)
