Message from the Guest Editor

The destruction caused by frequent hurricanes in the recent past calls for reliable storm surge models capable of predicting storm surges, floods, and levee overtopping phenomena. Forecast results from these models can facilitate effective and timely evacuations, which can potentially save lives and properties. These models can also be used to hindcast past hurricanes to improve the model capabilities and/or setup insurance strategies and policies. There has been extensive research on various aspects of hurricane storm surge modeling.

High quality papers are encouraged, for publication, directly related to various aspects, as mentioned below. Novel techniques for the study are encouraged.

- Topics—hurricane storm surge modeling
- Model development and validation
- Model improvement techniques and ideas
- Mathematical formulations and numerical aspects
- Storm surge forecast modelling challenges and remedies
- Case studies
- Storm surge model comparative studies
- Future of storm surge models
- History of storm surge modeling.

Message from the Editor-in-Chief

Journal of Marine Science and Engineering (JMSE, ISSN: 2077-1312) focuses on research in the fields of Ocean Engineering, Coastal Engineering, Physical Oceanography, Geological Oceanography, Marine Biology, and Marine Environmental Science. It publishes reviews, regular research papers, and short communications, as well as Special Issues on particular subjects. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed with Scopus, SCIE (Web of Science), Ei Compendex, GeoRef, Inspec, AGRIS, and other databases.

Journal Rank: JCR - Q2 (Engineering, Marine) / CiteScore - Q2 (Ocean Engineering)
