Dear Colleagues,

Offshore wind power is one of the renewable energy sources that is currently considered in the energy mix of some countries, and its use will increase in the future. At the end of 2017, there were a total of 18,814 MW of offshore wind installed worldwide, with the United Kingdom, Germany, China, Denmark and the Netherlands leading the way. The aim of this Special Issue is to put together papers that reflect the current state of the art of the offshore wind industry, covering all the aspects to be taken into account for the planning, design, construction, operation and maintenance and dismantling of the facilities, etc.

This Special Issue invites contributions that deal with all the previously mentioned aspects (but is not limited to them), including the following topics: legislation, environmental, wind resources, foundations and support structures, wind turbine generators, electrical connection, etc.

Prof. Dr. Charitha Pattiaratchi

Oceans Graduate School and The UWA Oceans Institute, The University of Western Australia, Perth, WA 6009, Australia The *Journal of Marine Science and Engineering (JMSE*; ISSN 2077-1312) is an international peer-reviewed open access journal which provides an advanced forum for studies related to marine science and engineering. The journal aims to provide scholarly research on a range of topics, including ocean engineering, chemical oceanography, physical oceanography, marine biology and marine geosciences. We invite you to publish in our journal sharing your important research findings with the global ocean community.
