Phaseresolving Surface Wave Modeling

Guest Editor:

Message from the Guest Editor

Prof. Dr. Dmitry Chalikov P.P.Shirshov Institute of

Oceanology, Russian Academy of Sciences, Moscow, Russia

Deadline for manuscript submissions: closed (10 August 2021) Dear Colleagues,

In contrast to the numerous attempts to describe the wave motion with different substitute equations, the numerical modeling is based on the initial equations of fluid dynamics with free surface. A phaseresolving technique allows considering waves as they are. It is the phaseresolving modeling that provides the opportunities for investigation and parameterization of physical processes in waves. This modeling can be used for development of spectral modeling, interpretation of wave spectrum in terms of real waves and for direct modeling of waves in small basins.

The high quality papers directly related to various aspects of wave modelling are encouraged for publication, including:

- Numerical schemes for solution of the full 2-D and 3-D equation of potential motion with free surface;
- Parameterization schemes for input and dissipation of energy.
- Examples of simulations.

Oceans Graduate School and The UWA Oceans Institute, The University of Western Australia, Perth, WA 6009, Australia The *Journal of Marine Science and Engineering (JMSE*; ISSN 2077-1312) is an international peer-reviewed open access journal which provides an advanced forum for studies related to marine science and engineering. The journal aims to provide scholarly research on a range of topics, including ocean engineering, chemical oceanography, physical oceanography, marine biology and marine geosciences. We invite you to publish in our journal sharing your important research findings with the global ocean community.
