# Diversity and Biotechnological Potential of Marine Microorganisms

### Message from the Guest Editors

This Special Issue welcomes scientific contributions on the following topics:

- findings in marine microbial biodiversity (the identification of new marine fungal, bacterial, or microalgae species);
- innovative approaches in cultivation methods;
- advances in biotechnological applications of marine microbial derived products (i) such as microbial lipids, fatty acids, pigments, aromas, phenolic compounds, polysaccharides, and enzymes for food technology, and (ii) marine-derived bioactive molecules like alkaloids, terpenoids, cyclopeptides, and lactones with great potential in nutraceuticals, cosmeceuticals, or pharmaceuticals;
- and genetically applied research including metagenomics, proteomics, combinatorial biosynthesis, expression systems, and bioinformatics.
