Advanced Remote Sensing Engineering Applied in the Environmental Monitoring of the Coasts

Message from the Guest Editors

In recent years, coastal environmental problems, such as red tides and sediment runoff, have been attracting a great deal of attention once again. Remote sensing has played a major role in understanding such wide-area phenomena. In addition, rapid advancements have been made in remote sensing technology. The purpose of this Special Issue is to publish cutting-edge research and reviews regarding these subjects and contribute to the solution of coastal environmental problems. Keywords: remote sensing; red tide; sediment runoff; seagrass; blue carbon; coast

About the Journal

Message from the Editor-in-Chief

Journal of Marine Science and Engineering (JMSE, ISSN: 2077-1312) focuses on research in the fields of Ocean Engineering, Coastal Engineering, Physical Oceanography, Geological Oceanography, Marine Biology, and Marine Environmental Science. It publishes reviews, regular research papers, and short communications, as well as Special Issues on particular subjects. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.

Editor-in-Chief

Prof. Dr. Charitha Pattiaratchi

School of Engineering, The UWA Oceans Institute, The University of Western Australia, Perth, WA 6009, Australia

Author Benefits

High Visibility:

indexed with Scopus, SCIE (Web of Science), Ei Compendex, GeoRef, Inspec, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Marine) / CiteScore - Q2 (Ocean Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
