

Special Issue

Technological Development, Management and Evaluation of Ship's Hull Biofouling

Message from the Guest Editors

IMO is working to minimize the transfer of invasive aquatic species through ship hull biofouling.

Technological development for in-water clearing of ship hulls by remote-operated vehicles and scuba divers are important to assess the potential risk to the marine environment for wastewater contamination. Our Special Issue is focused on response to IMO environmental regulations, development of effective management techniques for biofouling on ship hulls, construction for biofouling management system. The Issue considers articles in relation to the development of underwater clearing system by ROV and wastewater transport, treatment technology after in-water clearing.

Aims and scope: 1. development of biological and chemical risk assessment techniques for wastewater after biofouling removal; 2. establishment of risk management system of biofouling organisms; 3. diversity and ecology of biofouling organisms in ship hulls and ports; 4. establishment of risk assessment and management plan for biofouling organisms; 5. development of underwater clearing system by remote-operated vehicles; 6. development of wastewater transport and treatment technology after ship hull clearing.

About the Journal

Message from the Editor-in-Chief

Journal of Marine Science and Engineering (JMSE, ISSN: 2077-1312) focuses on research in the fields of Ocean Engineering, Coastal Engineering, Physical Oceanography, Geological Oceanography, Marine Biology, and Marine Environmental Science. It publishes reviews, regular research papers, and short communications, as well as Special Issues on particular subjects. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.

Editor-in-Chief

Prof. Dr. Charitha Pattiaratchi

School of Engineering, The UWA Oceans Institute, The University of Western Australia, Perth, WA 6009, Australia

Author Benefits

High Visibility:

indexed with Scopus, SCIE (Web of Science), Ei Compendex, GeoRef, Inspec, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Marine) / CiteScore - Q2 (Ocean Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
