Recent Advances in Sedimentology

Message from the Guest Editors

Sedimentology has remained an important direction of international research, and related investigations have significantly expanded our understanding of several types of depositional environments, including continental and transitional sedimentary successions and marine sequences. Such sedimentary successions hold precious information that can be used to reconstruct the evolution of past sedimentary basins by deciphering their dynamics and can further aid in locating abrupt depositional events on a regional or global scale. The current research priority in this field is the integration of geochemical data with traditional sedimentological data, which will provide novel and more accurate means to unravel the relationships among chemical, biological, ecological, and sedimentary systems. Articles submitted for this Special Issue must be related to the abstracts given in the special session S1 of the 16th International Congress of the Geological Society of Greece entitled “Evolving techniques in the study of sediments” (<https://gsg2022.gr/special-sessions>).

About the Journal

Message from the Editor-in-Chief

Journal of Marine Science and Engineering (JMSE, ISSN: 2077-1312) focuses on research in the fields of Ocean Engineering, Coastal Engineering, Physical Oceanography, Geological Oceanography, Marine Biology, and Marine Environmental Science. It publishes reviews, regular research papers, and short communications, as well as Special Issues on particular subjects. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.

Editor-in-Chief

Prof. Dr. Charitha Pattiaratchi

School of Engineering, The UWA Oceans Institute, The University of Western Australia, Perth, WA 6009, Australia

Author Benefits

High Visibility:

indexed with Scopus, SCIE (Web of Science), Ei Compendex, GeoRef, Inspec, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Oceanography) / CiteScore - Q1 (Ocean Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 15 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the first half of 2026).
