Advances in Ocean Models: Uncertainties, Predictive Skills, and Physical-Biological- Biogeochemical Interactions

Message from the Guest Editor

The development of ocean circulation models has proceeded rapidly over the last 25 years, with progress being made in three key areas. First, the number and spatial extent of models for predicting transport at estuarine, shelf, basin, and global scales has increased. Second, the horizontal resolution of models has increased sufficiently to resolve eddy mixing. Third, the vertical resolution of models has increased to allow better understanding of vertical exchanges. Curiously, despite these advances, uncertainties in ocean models are rarely quantified, uncertainties are not often compared, and the limits of prediction skills in 4D (space \times time) are not always investigated. In this Special Issue, we would like to focus on established and new implementations of ocean models, with particular attention to the more recent ones, the gains made by increasing the resolution of the models, the predictive skill of alternative models, the mechanistic cause of differences in predictive skill, and efforts to understand physical, biological, and biogeochemical variability with ocean models.

About the Journal

Message from the Editor-in-Chief

Journal of Marine Science and Engineering (JMSE, ISSN: 2077-1312) focuses on research in the fields of Ocean Engineering, Coastal Engineering, Physical Oceanography, Geological Oceanography, Marine Biology, and Marine Environmental Science. It publishes reviews, regular research papers, and short communications, as well as Special Issues on particular subjects. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the maximum length of the papers.

Editor-in-Chief

Prof. Dr. Charitha Pattiaratchi

School of Engineering, The UWA Oceans Institute, The University of Western Australia, Perth, WA 6009, Australia

Author Benefits

High Visibility:

indexed with Scopus, SCIE (Web of Science), Ei Compendex, GeoRef, Inspec, AGRIS, and other databases.

Journal Rank:

JCR - Q2 (Engineering, Marine) / CiteScore - Q2 (Ocean Engineering)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 16.5 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the second half of 2025).
