Message from the Guest Editor

The diagnosis and management of all diseases caused by *Aspergillus* species, from allergic to invasive conditions, have changed rapidly over the last several years. This Special Issue is designed to highlight some of the latest clinical and translational thoughts on the entire spectrum of disease management. Special topics will include the epidemiology in specific patient populations, diagnosis of disease and definitions of resistance, and antifungal management of allergic, invasive, and chronic forms of aspergillosis. Authors are specifically chosen as experts in those sub-fields, who are actively researching these topics and leading the charge to improve the current diagnostic and clinical states.
