

Special Issue

Advances in Interstitial Lung Diseases: From Diagnosis to Treatment

Message from the Guest Editors

This Special Issue aims to provide an updated and multidisciplinary perspective on ILDs, covering state-of-the-art diagnostic methods, novel therapeutic strategies, and the role of personalized medicine. We seek to explore the impact of telemedicine in ILD management, particularly its potential for remote monitoring, early exacerbation detection, and expanded access to specialized care.

We invite researchers and clinicians to submit original research reports on novel treatment strategies and advances in decision making, and comprehensive reviews covering the following areas:

Advancements in ILD diagnosis, including high-resolution computed tomography (HRCT), artificial intelligence, and biomarker discovery.

Novel therapeutic approaches, such as antifibrotics, biologics, and combination therapies.

Holistic and multidisciplinary management strategies, including nursing care, pulmonary rehabilitation, psychological support, and patient-centered care.

The role of telemedicine and digital health solutions in ILD monitoring and treatment.

About the Journal

Message from the Editor-in-Chief

Over the last decade, the amount of information pertaining to thoracic structures has been unprecedented. The thorax is unique in terms of the different structures that involve the respiratory system—lungs, pleura, upper and lower respiratory tract—all located in the mediastinum that by itself represents a different compartment with its own wealth of conditions, and that also includes the Thymic gland. Therefore, we believe that the availability of a new open access journal, *JoR*, dedicated to highlighting and disseminating information related to the respiratory system is not only timely but is also absolutely necessary. As we can see, the information related to the respiratory systems is vast and there could not be anything more and better than to have a journal that is dedicated to the promotion, dissemination, and efficient publication of timely articles on the respiratory system including all its structures.

Editor-in-Chief

Prof. Dr. Cesar A. Moran

Department of Pathology, University of Texas MD Anderson Cancer
Center, Houston, TX, USA

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 30.5 days after submission; acceptance to publication is undertaken in 5.6 days (median values for papers published in this journal in the first half of 2025).

Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
