# Interventional Pulmonology: An Exciting New Subspecialty Within Pulmonary Medicine

### Message from the Guest Editor

Interventional pulmonology (IP) has emerged as a developing subspecialty within pulmonary medicine over the last several years. It has addressed a critical need in terms of the minimally invasive evaluation, diagnosis, and management of pulmonary pathology. Indeed, significant advancements have been made in lung cancer staging, the diagnosis of peripheral lung nodules, central airway obstruction, the evaluation of the pleural space, and the bronchoscopic management of chronic obstructive pulmonary disease, among other areas. This Special Issue will provide an overview of the various procedures within interventional pulmonology, including endobronchial ultrasound, robotic bronchoscopy, pleuroscopy, rigid bronchoscopy, airway stenting, thermal and cryotherapy, and endobronchial valves. We will additionally review the history of interventional pulmonology as well as the development of formal subspecialties fellowship training in IP. With this Issue, it is our aim to increase knowledge and awareness of the significant utility of the various branches of interventional pulmonology in patient care.

## About the Journal

### Message from the Editor-in-Chief

Over the last decade, the amount of information pertaining to thoracic structures has been unprecedented. The thorax is unique in terms of the different structures that involve the respiratory system—lungs, pleura, upper and lower respiratory tract—all located in the mediastinum that by itself represents a different compartment with its own wealth of conditions, and that also includes the Thymic gland. Therefore, we believe that the availability of a new open access journal, *JoR*, dedicated to highlighting and disseminating information related to the respiratory system is not only timely but is also absolutely necessary. As we can see, the information related to the respiratory systems is vast and there could not be anything more and better than to have a journal that is dedicated to the promotion, dissemination, and efficient publication of timely articles on the respiratory system including all its structures.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 30.5 days after submission; acceptance to publication is undertaken in 5.6 days (median values for papers published in this journal in the first half of 2025).

#### Recognition of Reviewers:

APC discount vouchers, optional signed peer review, and reviewer names published annually in the journal.
