

Topical Collection

Feature Papers in *Journal of Respiration*

Message from the Collection Editor

Suggestions as Topical Collections include but are not limited to:

Diagnostic Imaging—the different techniques currently available for the diagnosis of the numerous conditions in the thorax;

Pulmonology—nontumoral conditions of the thorax: pleural and lung;

A topical collection of pleural diseases—diagnosis and treatment;

Topical collection of lung non-neoplastic conditions—diagnosis and treatment;

Lung neoplasia—diagnosis and treatment;

Pediatric pulmonary conditions;

Thoracic diseases—a focus on undeveloped countries: diagnostic and treatment options.

Surgery—A topical collection of the different approaches for the treatment of neoplastic conditions: thoracotomy, robotic procedures, and other minimally invasive procedures.

I look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Over the last decade, the amount of information pertaining to thoracic structures has been unprecedented. The thorax is unique in terms of the different structures that involve the respiratory system—lungs, pleura, upper and lower respiratory tract—all located in the mediastinum that by itself represents a different compartment with its own wealth of conditions, and that also includes the Thymic gland. Therefore, we believe that the availability of a new open access journal, *JoR*, dedicated to highlighting and disseminating information related to the respiratory system is not only timely but is also absolutely necessary. As we can see, the information related to the respiratory systems is vast and there could not be anything more and better than to have a journal that is dedicated to the promotion, dissemination, and efficient publication of timely articles on the respiratory system including all its structures.
