Special Issue

Mobile Politics

Message from the Guest Editors

We navigate an increasingly complicated information environment with- and on- our mobile devices. Mobile devices have disrupted how we interact with information, changing the way news is produced, how we interact in the public sphere, and our perceptions of proximity and relevance. We argue that the shift to mobile has profoundly influenced our politics and communication from the way information is consumed to the way information is produced, with consequences for the public. However, while these changes represent one of the most significant developments in communications in this century, the study of mobile is often narrowly focused on technology or access. The goal of this special issue is to create a venue for researchers to tease out what mobile politics means in the context of political, communication, and journalism research. We consider both mobile and politics broadly and invite scholars from all the disciplines that attend to both areas to contribute. Questions may range from – but are not restricted to - information production and consumption, over conducting politics on mobile devices, to the role of mobile communication in political systems. Author Benefits

Open Access:
free for readers, with article processing charges (APC) paid
by authors or their institutions.

High Visibility:
indexed within ESCI (Web of Science), Scopus and other
databases.

Rapid Publication:
manuscripts are peer-reviewed and a first decision is
provided to authors approximately 29.2 days after
submission; acceptance to publication is undertaken in 4.9
days (median values for papers published in this journal in
the first half of 2025).
