Deadline for manuscript
submissions:

closed (15 April 2021)

Message from the Guest Editor

The aim of this Special Issue is to present current best practices, emerging areas of development, and informatics approaches in applying personalized genomic medicine into the clinical environment.

We are inviting the submission of original articles and reviews for this Special Issue. Articles may be focused on (though not limited to) the clinical application of: bioinformatics, phenotype-based approaches to diagnostic sequencing, genomic screening, polygenic risk scores, risk alleles and low penetrance variants, genomic-based blood typing, integrative reporting, and return of genomic results, including applications and methods communicating with the HER.

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
