Message from the Guest Editor

Dear Colleagues,

Chronic kidney disease is one of the most important risk factors for end-stage kidney disease. The number of chronic kidney disease patients is increasing, especially with age. The optimal strategy to prevent the progression of chronic kidney disease is an urgent question worldwide that remains unanswered. This Special Issue of the *Journal of Personalized Medicine* aims to highlight the current state of the science and showcase some of the latest findings in the field of chronic kidney disease. We seek studies, including those that explore any conditions related to chronic kidney disease, using basic science, clinical and population-based approaches, as well as all kinds of behaviors for public awareness. Scientific advances in the field of chronic kidney disease will provide the promise of a more optimistic future for patients.

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
