Deadline for manuscript  
submissions:

**closed (25 March 2023)**

### Message from the Guest Editors

Dear Colleagues,

Personalized medicine is a dynamic and rapidly developing approach in clinical practice that involves using innovative technologies to make decisions in the screening, prevention, diagnosis, and treatment of disease. Chronic liver disease is a progressive deterioration of hepatic functions and a continuous process of inflammation, destruction, and regeneration of liver parenchyma, resulting in fibrosis and cirrhosis. The spectrum of etiologies encompasses metabolic disorders, viral infection, toxins, alcohol abuse, and genetic and autoimmune diseases.

The *Journal of Personalized Medicine* aims to publish a collection of articles exploring recent findings and progress in personalized medicine for chronic liver disease. We will consider original research, systematic reviews, and analyses that report both experimental and clinical studies on integrating precision medicine in the management of chronic liver disease.

Dr. Jinzhou Zhu

## Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, PMC, Embase, and other databases.

**Journal Rank:** CiteScore - Q1 (Medicine (miscellaneous))
