Message from the Guest Editors

Dear Colleagues,

Since the introduction of robotic surgery in the early 2000s, several studies have demonstrated its safety and feasibility in various complicated procedures including esophageal, gastric, and colorectal surgery—for both benign and malignant pathologies—hepatobiliopancreatic surgery, and gynecological and urological procedures.

Robot-assisted surgery provides the advantages of a magnified tridimensional view and of movement stability without tremor, which facilitate a precise dissection. The EndoWrist instrument also facilitates dissection at difficult angles, thus enabling surgery in complex conditions.

Even if some of the advantages of robotic surgery have been defined, we are still far from clearly recognizing precise indications for a robotic approach in gastrointestinal surgery.

With this Special Issue, we aim to investigate the conditions supporting the robotic approach in gastrointestinal surgery toward the definition of golden standard robotic procedures as established in urological surgery for prostatectomy.

Prof. Dr. Marco Milone

Journal of Personalized Medicine (JPM; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. JPM publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, ‘omics association analysis). JPM is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Author Benefits

Open Access: — free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.
Journal Rank: JCR - Q2 (Health Care Sciences & Services)
