### Message from the Guest Editor

Dear Colleagues,

Malignant tumors often cause cervical lymphatic metastasis. Primary cancers such as the nasopharyngeal cavity, nasal cavity, oral cavity, and throat are highly invasive and easily metastasize to the cervical lymph nodes, resulting in poor prognosis and low survival rate of patients. Therefore, a clear understanding of the mechanism by which head and neck cancer causes high invasiveness can be effectively treated. So far, the treatment strategy of surgery has been mature. In the future, it must combine multiple disciplines and medical management to ensure that patients receive the best medical services. In recent years, treatment strategies have gradually become novel, and adjuvant therapy has been found to be helpful in cancer treatment and clinical research. The current CCRT treatment policy has been steadily carried out, and further treatment with natural plants or Chinese herbal medicine can improve the therapeutic effect.

## Message from the Editor-in-Chief

*Journal of Personalized Medicine (JPM; ISSN 2075-4426)* is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, ‘omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

**Journal Rank:** JCR - Q2 (*Medicine, General & Internal*) CiteScore - Q2 (*Medicine (miscellaneous)*)
