### Message from the Guest Editors

Despite the large-scale studies conducted so far, a deeper knowledge is further needed to help in translating the recently discovered molecular mechanisms into clinical settings, from the development of early diagnosis biomarkers to the development of new pharmacological treatments.

We are inviting the submission of original articles to this Special Issue of the *Journal of Personalized Medicine* that report new findings in the molecular neurobiological bases of neurodegenerative diseases, coming from omics-based approaches (e.g., from genomics to proteomics) or from functional studies (e.g., in vitro and in vivo studies).
