### Message from the Guest Editor

Dear Colleagues,

Acute care surgery (ACS) and trauma surgery (TS) are associated with a high rate of postoperative complications and poor prognosis compared to elective surgery. In recent decades, failure to rescue (FTR), defined as the death of a patient who has experienced severe complications, has emerged as a quality metric for evaluating definitive outcomes in patients who have undergone emergency surgical procedures. This Special Issue focuses on the vast plethora of complications that can arise after emergency surgical procedures in trauma and non-trauma patients. Articles evaluating the reliability of prognostic clinical and radiological scores in ACS and TS will also be considered in this Special Issue to highlight the need for a standardized approach in the emergency setting.

## Message from the Editor-in-Chief

*Journal of Personalized Medicine (JPM; ISSN 2075-4426)* is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, ‘omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

**Journal Rank:** JCR - Q2 (*Medicine, General & Internal*) CiteScore - Q2 (*Medicine (miscellaneous)*)
