Message from the Guest Editor

Dear colleagues,

As precision medicine interventions continue to gain evidence, there is increasing interest in how to best integrate these into clinical care. While some precision medicine interventions are specialty-specific, the identification of risk and development of risk mitigation strategies are foundational elements of primary care. Precision medicine interventions span digital health, family health history, pharmacogenomics, and beyond. In this issue, we are seeking manuscripts spanning development to clinical effectiveness and utility studies, as well as qualitative studies evaluating the psychosocial aspects of precision medicine in primary care from a patient and provider perspective.
