Message from the Guest Editor

Dear Colleagues,

The cornea is not only the outmost layer of the eyeball, but it also transmits the light essential for vision, giving focus to images. Recent medical and technological innovations have improved cornea diagnosis and contributed to the variety of treatments available.

This Special Issue of the *Journal of Personalized Medicine* aims to explore updates and perspectives on all kinds of ocular surface diseases, such as keratitis, corneal neovascularization/lymphangiogenesis, dry eye, pterygium, ocular surface related surgery, etc. We are pleased to invite you to contribute studies that use basic science, clinical, and population-based approaches, including, but not limited to, mechanism research, diagnosis, and therapy. Original research articles and reviews are welcome.

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
