Message from the Guest Editor

Dear Colleagues,

The concepts of personalized medicine have been around for decades, but in the 10 years following the full sequencing of the human genome there has been an explosion of research into methods and tools to further personalize patient care. Some of these, particularly in the field of oncology, have been readily adopted into clinical practice; but most have yet to be integrated into mainstream clinical care. This issue of the Journal of Personalized Medicine will highlight research that is leading the way in bringing Personalized Medicine tools, including risk stratification, family health history, genetics, or genomics, into the clinic. These studies should present data related to important concepts such as adoption barriers and solutions, education, and/or implementation to promote dissemination and broad uptake of these tools.

Dr. Lori A. Orlando

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
