Dr. Nina Sperber

1. Durham VA Health Care
System, Durham, NC, USA
2. Department of Population
Health Sciences, Duke University
School of Medicine, Durham, NC,
USA

Message from the Collection Editors

The rapid development of genomic technologies has generated important questions for policy makers, health system leaders, laboratories, clinicians, patients, and the public. The *Journal of Personalized Medicine* aims to publish a collection of articles that explore the legal, ethical and economic challenges and opportunities of the field and provide fresh insights to ongoing discussions and debate in genomic medicine. We will consider original research, systematic reviews, and well-designed case studies and analyses that report empirical work that presents experiences and perspectives from the US and abroad.

The included topics in the issue are:

- Policy analyses of genomic medicine, including data privacy and sharing of results
- Ethical frameworks for genomic information disclosure, such as the disclosure of secondary findings in pediatric populations
- Comparative effectiveness of genomic medicine
- Economic evaluations of genomic medicine, including methods and challenges
- Implementation of genomic medicine in diverse health care settings, including methods and challenges
- Pricing, coverage and reimbursement of genomic medicine

an Open Access Journal by MDPI

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank: CiteScore - Q1 (Medicine (miscellaneous))
