Deadline for manuscript submissions:  
**closed (15 June 2023)**

### Message from the Guest Editor

Allergen immunotherapy is a medical treatment for allergies. It is a *disease-modifying therapy*, indicated for the treatment of allergic rhinitis, allergic conjunctivitis, allergic asthma, and Hymenoptera hypersensitivity. Allergen immunotherapy can be administered either subcutaneously in a physician's office or sublingually by a patient at home. Oral immunotherapy is used in food allergies. In addition, several biologics that control specific responsible molecules and directly suppress allergic reactions have recently become available. Even in the current era, the significance of allergen immunotherapy, which modifies the natural history of allergic diseases, seems to be prominent.

This Special Issue aims to highlight the role of personalized medicine in clinical practice, providing a complete overview of allergen immunotherapy and highlighting the critical issues in its management. We welcome the submission of original papers and reviews regarding allergen immunotherapy for allergic diseases.

## Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, PubMed, PMC, Embase, and other databases.

**Journal Rank:** CiteScore - Q1 (Medicine (miscellaneous))
