Message from the Guest Editor

Lung cancer is the most common cause of cancer-related mortality worldwide. Although new therapeutic strategies are defined according to the molecular profile of the tissue, a high rate of these targeted therapies fail to cure the disease because of several biological and technological challenges, mainly the heterogeneity of the tumor. The purpose of this Special Issue, *Personalized Medicine in Lung Cancer: Diagnosis, Treatment and Prognosis*, is to highlight: 1) the benefit of personalized medicine in the diagnosis, treatment, and prognosis of lung cancer patients; 2) the new assays that could achieve high sensitivity for early detection of minimal residual disease (MRD) in lung cancer patients; 3) the crucial role of liquid biopsies in personalized medicine in lung cancer; and 4) the spatial heterogeneity as well as temporal heterogeneity between the primary tumor and local or distant recurrences in the same patient. Finally, we also wish to present the rapid development of technology and drugs in this area of research.

Message from the Editor-in-Chief

Journal of Personalized Medicine (JPM; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, ‘omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

Journal Rank: JCR - Q2 (*Medicine, General & Internal*) CiteScore - Q2 (*Medicine (miscellaneous)*)
