Message from the Guest Editor

This Special Issue aims to highlight current trends in target discovery research as well as their clinical applications in diseases related to precision medicine. Targets are defined broadly and can include things such as single-nucleotide polymorphisms (SNPs), RNA/protein expression, and metabolites.

We invite submissions to this Special Issue which include original research, review articles, and data analyses related to the discovery of targets which may be of use in precision medicine. We welcome articles relating to any disease.
