### Message from the Guest Editors

Dear Colleagues,

Chronic vascular diseases are a clinical medicine problem that consumes a large amount of economic resources and that most affects the quality of life of the patient. In this sense, biological and medical research has advanced to develop new personalized strategies that allow a better approach to the patient. The connection between research and clinical practice is essential to achieve effective and efficient knowledge generation.

For this reason, investigations have to understand all the aspects that allow us to know the state of the tissue, the histology, and the systemic repercussions. Tissue engineering therapies are necessary to allow an effective and integrative repair of tissues damaged by these diseases. All this allows the development of personalized medicine.

Therefore, the aim of this Special Issue is to allow biological and medical research to play a key role in chronic vascular diseases for a better and personalized therapy for these patients.

## Message from the Editor-in-Chief

*Journal of Personalized Medicine (JPM; ISSN 2075-4426)* is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, ‘omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, and other databases.

**Journal Rank:** JCR - Q2 (*Medicine, General & Internal*) CiteScore - Q2 (*Medicine (miscellaneous)*)
