Special Issue

Personalized Medicine for Maternal-Fetal Medicine

Message from the Guest Editor

Personalized medicine is transforming maternal–fetal care, evolving from traditional one-size-fits-all approaches to targeted therapies that consider individual genetic, environmental, and lifestyle factors. This paradigm shift is particularly crucial in obstetrics, where early detection and customized interventions can significantly improve outcomes for both mother and child. This Special Issue will explore advances in managing diseases in pregnancy, including endometriosis, preterm birth, preeclampsia, gestational diabetes, and other complex conditions.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on "omics"-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical

subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2. Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
