

## Special Issue

# Endocrine Autoimmune Diseases: Pathogenesis and Personalized Therapy

### Message from the Guest Editors

The investigation of autoimmune endocrine diseases is proving to be of crucial importance for early diagnosis and prompt management. Notably, if the management is delayed or not tailored, it can even be fatal.

Personalized therapy could be the answer to the challenge in therapy of endocrine autoimmune disorders and endocrine immunotherapy toxicity. According to the clinical, histological and molecular characteristics, the therapy can be tailored to the patient in order to obtain the maximum efficacy of the treatment and of the patient's compliance. The prompt diagnosis of endocrine toxicity in cancer patients in immunotherapy is also an important factor and a great determinant to adherence to immunotherapy. The Special Issue, entitled 'Autoimmune Diseases: Pathogenesis and Personalized Therapy', invites research and papers concerning the autoimmune endocrine diseases and endocrine adverse events related to immunotherapy, their diagnosis, and their treatment. Authors are invited to participate with clinical research articles, reviews, and communications.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
