

Special Issue

Precision Emergency Medicine

Message from the Guest Editors

Emergency medicine is a discipline that encounters an extensive range of conditions, patients, and settings, which are not always suitable for the characterization of patients. The development of precision tools in order to deal with characterization is one of the most valuable areas of research in emergency medicine. The aim of this Special Issue is to collect cutting-edge research concerning risk scores, biomarkers, predictive models, and tools that, through the concept of personalization, aid health care professionals characterizing patients. We welcome authors to submit original articles or reviews on emergency medicine.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
